

Precision Optical Measurement Solutions for Today's Complex Industrial Challenges.

Traceability

Outputs uncertainty along with measurements to ensure reliability and accuracy.

Surface-agnostic

Handles challenging surfaces with precision, for example metallic and glossy surfaces.

Multi-sensor Systems

Employs various measurement techniques to achieve superior accuracy.

Areal Surface Measurement

Advanced blue-light fringe projection for precise surface and topography measurements across various industries.

Extrusion Profiling System

Real-time optical measurement of extruded metal billets with accuracy down to 20 micrometres.

Post-process Measurement

Versatile optical metrology system combining fringe projection and photogrammetry for accurate defect detection and comprehensive part analysis.
